↔

## Annotations:

1. Dropdown of 6-7 cities, including New York, London, etc. (Should there be an “Other” option that defaults to canceling out the auction house toggle and next prompts you to manually enter your own percentages in space below?)
2. List of three auction houses, Sotheby’s, Christies, and Phillips. (Again with the “Other” option?)
3. These three percentage fields can be editable, but that’s not a primary or default behavior, so it shouldn’t be emphasized. This entire space is mostly a guide realm, and not meant to be a primary focus area like a button. Think of it as a walkthrough bridge as to how you’re getting from the dropdowns above to the value converter directly below.
4. Allow for entry into either field, and the other side populates accordingly. Either in realtime, or if you need a button, set it like this with a currency conversion model where you can click the arrow toggles to hint at the potential for action here?
